Professional Summary

Electrical Engineering graduate (NIT Agartala) with product management experience across two fast-paced startups and a product portfolio built entirely in Indian consumer fintech — UPI fraud analytics on 590K+ transactions, a privacy-first micro-investing app, and a thin-file credit underwriting prototype. Writes PRDs, user stories, and acceptance criteria engineering can build against; hands-on with SQL/PostgreSQL, UPI Intent (API-based) payment flows, and analytics dashboards for defining and tracking product success metrics.

Education

National Institute of Technology Agartala
B.Tech, Electrical Engineering

Agartala, India
Dec 2021 – May 2026

Indian Institute of Technology (IIT) Mandi
Minor, Business Analytics — Product Analytics

Remote / Hybrid
Jan 2025 – Apr 2026

Experience

WhatBytes

Product Management Intern

Remote
March 2026 – May 2026

- Owned end-to-end delivery for 9 high-velocity B2B SaaS projects — built the product roadmap and prioritisation framework across them, wrote product requirements, user stories, and acceptance criteria, and defined the success metrics each release was measured against.
- Led cross-functional syncs and stakeholder communications, bridging requirements between developers and clients to resolve blockers and drive delivery with minimal escalation.

Pulsepeek

Product Management Intern

Remote
Jan 2026 – Feb 2026

- Conducted 20+ user discovery interviews, uncovering journey pain points and synthesising findings into a prioritised PRD with user stories and workflows — delivering prototypes 2 weeks ahead of schedule and cutting engineering rework.
- Translated ambiguous health data requirements into logic flows and functional specifications reviewed by the founding team, serving as the primary bridge between technical and non-technical stakeholders.

Product Portfolio

UPI Fraud Detection Analytics Dashboard | *SQL, PostgreSQL, Power BI* | [GitHub Repo](#)

Jul 2026

- Built a fraud analytics pipeline on 590K+ transactions using PostgreSQL window functions (rolling risk-scoring, 10-minute velocity detection) and an interactive Power BI dashboard; root-cause analysis surfaced a ~2x hourly swing in fraud volume, and I defined the monitoring thresholds — and the false-positive cost a risk team would tune them against — in SQL so analysts could retune without a model retrain.

SpareRocket: Micro-Investing Ecosystem | *System Design, Fintech Strategy, UX* | [Live Demo](#) | [Case Study](#)

Jan 2026

- Architected a student-focused micro-investing ecosystem on UPI Intent (API-based) payment flows with a privacy-first, zero-read-permission design — a constraint that ruled out automatic round-ups, so I specified a behavioural nudge engine and streak-based rewards to recover the activation loop instead.

‘Future-Potential’ Credit Underwriting Engine | *Python, Streamlit, Plotly* | [Live App](#)

Dec 2025

- Built a Streamlit web app visualizing credit risk for students without CIBIL history, using a proxy scoring model (Pandas/NumPy) that synthesizes alternative data into a single risk metric with dynamic credit limit assignment logic.

Leadership

MUNSOC NIT Agartala

Founder & Lead, Student Organization

Agartala, India
May 2023 – Nov 2024

- Founded and scaled to 120+ active members; wrote the SOPs still in use, managed cross-functional teams across 11 national-level events, and iterated on formats via post-event feedback loops.

Skills

Data & Analytics: SQL, PostgreSQL, Power BI, Tableau, Google Analytics, Python (Pandas, NumPy), Funnel Analysis, Root-Cause Analysis

Product: PRDs & Functional Specifications, User Stories, Acceptance Criteria, Roadmapping, Prioritization (RICE/MoSCoW), OKRs, Success Metrics & Post-Launch Evaluation, Agile/Scrum

Research & Design: User Research, Discovery Interviews, Usability Testing, Figma, Notion, Jira
