Summary

Electrical engineering grad and product manager who starts with how people actually live and use things, then prototypes fast to test it. Drawn to products where the small details are the product. New grad, ready to own outcomes from day one.

Education

National Institute of Technology Agartala — Agartala, India
B.Tech, Electrical Engineering — *Dec 2021 – May 2026*

Indian Institute of Technology (IIT) Mandi — Remote / Hybrid
Minor, Business Analytics – Product Analytics — *Jan 2025 – Apr 2026*

Experience

Noise — Gurugram, India (Onsite)
Product Intern, Wearables – Product Management & Experience — *Nov 2026 – Present*

- **Checkout, Noise wearables app:** traced a drop-off point to a **forced re-login** inside the in-app webview; specifying an **auto-login hand-off** with engineering to remove that step for every buyer.
- **Segmentation:** analysing 6 months of purchase and usage data across **millions of active users** to build **6–8 behavioural cohorts**.
- **Personalised nudges:** targeting each cohort on the **app home page** and via **push** to lift conversion.

WhatBytes — Remote
Product Management Intern — *Mar 2026 – May 2026*

- **Crypto-fintech app:** closed all **10 launch-blocking sign-up bugs** and drove an onboarding rebuild to get it launch-ready.
- **Recruitment platform, NYC client:** rescued a stalled launch with 3 developers, clearing **5 blockers** to deliver **1 week early**.
- **Latin American fintech app:** owned Play Store and App Store releases end to end, taking builds live on both stores.

Pulsepeek — Remote
Product Management Intern — *Jan 2026 – Feb 2026*

- **Health-tech MVP:** ran **20 user interviews**, found confusion was the core barrier, and built the fix (an in-app guide) into a prototype with founders and developers, **2 weeks ahead of schedule**.

Projects

Founder Desk: India–US Compliance Desk | *Next.js, TypeScript, Gemini, Vercel* | Live App | GitHub — Oct 2026

- Built solo with Cursor and Claude: a 12-month deadline calendar across Delaware, IRS, MCA and RBI rules (US rules **verified against official sources**), a franchise tax checker and an **LLM inbox** that turns notices into deadlines.
- Designed for trust: every AI field shows a source quote and needs human review, deadlines use statutory dates with per-rule weekend rules, and a free-tier LLM is kept reliable with retries, a fallback model and quota caps; **112 automated tests**.

Second Take: Hard-Conversation Practice App | *React, TypeScript, Cursor, Vercel* | Live Demo | GitHub — Oct 2026

- Built and shipped solo in **a few days**: 3 scenes where each partner has a hidden want, triggers and a −3 to +3 mood model, with every reply scored against a skill rubric and given line-by-line feedback.
- Kept scenes as JSON, separate from code, with a **build-time validator** that fails the build on structural writing errors; merged branches each turn so each line needs 3 versions, not an exponential tree.

Vibeshelf: Cross-Media Recommendation Engine | *Llama 3.3-70B, Groq, Netlify* | Live Demo | Case Study — Jun 2026

- In a 2-person hackathon team, owned framing, scope and UX: reframed recommendations from ranking to input vocabulary, shipping a **live 547-title LLM tag-matching MVP** for books, films and games **in 48 hours**.

Leadership

MUNSOC NIT Agartala — Agartala, India
Founder & Lead, Student Organization — *May 2023 – Nov 2024*

- Founded the society and scaled it to **120+ active members** across 11 national events, writing SOPs still in use.

Skills

AI & Build: Claude, Claude Code, Cursor, LLM APIs (Gemini, Groq, Llama 3.3), React, TypeScript, Python (Pandas, Streamlit), Git
Ship & Measure: Vercel, Netlify, Streamlit Cloud, PostHog, SQL (PostgreSQL), Google Analytics, Power BI, Plotly
Product & Ops: Customer Discovery, Cohort Analysis, Scoping & Prioritization, Launch Readiness / UAT, Figma, Jira, Notion
